# MONTHLY PRICES OF SELECTED CALIFORNIA TRUCK CROPS ON THE SAN FRANCISCO, OAKLAND, LOS ANGELES, AND NEW YORK CITY MARKETS 1910-1934

H. J. Stover [1] and A. W. Stuart [2]

The monthly market prices of selected truck crops presented herein have been compiled in response to a long-recognized need of the large and expanding California truck-crop industry for this information. [3]

Changes in the character of the various truck crops produced, in the form in which they are sold, and in the method of packing and type of package used have made it extremely difficult to secure comparable price data for any length of time. Such available information as could be readily obtained has been used in determining the size of the various factors employed in converting prices quoted in various units to a comparable basis. The resultant price series is presented at this time, in preliminary form, with the hope that helpful suggestions and criticisms may be forthcoming and with the expectation that, despite several recognized limitations, the data may serve a very useful purpose.

Sources of Data.-- The original price data for these tabulations were secured from the following sources:

San Francisco -- The Pacific Rural Press (1910-1922), the San Francisco Call (1910-1922), and the daily reports for local fruits and vegetables released by the San Francisco office of the Federal-State Market News Service (1923-1934).

Oakland -- The Oakland Tribune.

Los Angeles -- The Los Angeles Times (1910-1922) and the daily reports for local fruits and vegetables, released by the Los Angeles office of the Federal-State Market News Service (1923-1934).

New York City -- The Producers' Price-Current.

Truck Crops Included.-- Monthly prices for each of the following truck crops are presented in this report: artichokes, asparagus, lima beans, string beans, beets, cabbage, cantaloupes, carrots, cauliflower, celery, lettuce, onions (yellow), peas, spinach, tomatoes, and watermelons. The San Francisco

[3] The tabulation of these prices was made possible through the assistance rendered by persons employed on C.W.S. and S.E.R.A. funds.

---

market quotations for all of these products are included; the Oakland market, all products except beets and cabbage; and the Los Angeles market, all products, except artichokes. The New York market quotations do not include lima beans, string beans, beets, cabbage, onions, spinach, or watermelons.

Method of Tabulating Price Data.-- The monthly prices included in this report are based upon sample quotations secured from the several original sources. In tabulating prices from daily reports, five quotations per month were selected as a basis for the monthly averages. This selection was made by taking quotations for produce sold on or about the third, ninth, fifteenth, twenty-first, and twenty-seventh days of each month. Prices obtained from the Pacific Rural Press, a weekly publication, were tabulated as issued and monthly averages calculated from these weekly quotations.

The monthly prices were obtained in all cases by computing simple arithmetic averages of the quotations secured for each month. When a price was quoted in the form of a range, as 6 @ 7¢, the arithmetic mean of the two figures was used in the calculation of the monthly average. Some monthly prices presented herein are based on a smaller number of quotations than indicated above. When this was done, a notation to that effect is made in the footnotes to the tables. No monthly price is included which is based on less than three quotations.

In the transcription of the prices from the original sources, all quotations were tabulated. However, in order to secure one continuous series of prices, expressed in the same unit throughout, it was necessary to set up some basis for converting prices quoted in different units to one common denominator. This was done by selecting one unit of measure or weight as the standard and converting prices expressed in all other units to the approximate equivalent of that unit. The conversion factors used in this process were, in most cases, derived through estimates of the relative sizes of various containers and of the weights of various quantities of the products concerned. 4/ The quoting of prices in several different units at the same time made possible a certain amount of checking on these factors. A notation relative to the specific conversion factors used accompanies each table of prices.

Utilization of the Data.-- The series of prices presented herein is not equally suitable for all purposes. It is, therefore, important that persons using these data understand their characteristics and realize both their advantages and limitations before applying them to any particular purpose.

Heretofore, very little information of any character pertaining to the prices (farm, wholesale, or retail) of important truck crops has been available. Until comparatively recent years, the truck-crop industry even in California was not of sufficient importance to justify the devotion of much time and effort to the compilation of such information. The time is fast approaching, however, when the availability of these data will be imperative.

In the compilation of the price series presented herein, emphasis has been placed upon the securing of a broad general picture of truck-crop price

---

4/ Acknowledgments are due to L. A. Crawford and Dr. S. W. Shear of the Giannini Foundation, and W. L. Jackson of the San Francisco office of the Federal-State Market News Service, for valuable assistance in determining the cubic contents and net weights of various containers.

---

behavior. The data for individual products for specific months are not sufficiently refined as to justify their use in a detailed price analysis. Improvements which will be made in the data during future years may eventually permit their use for this purpose.
